

Microsoft Windows Update

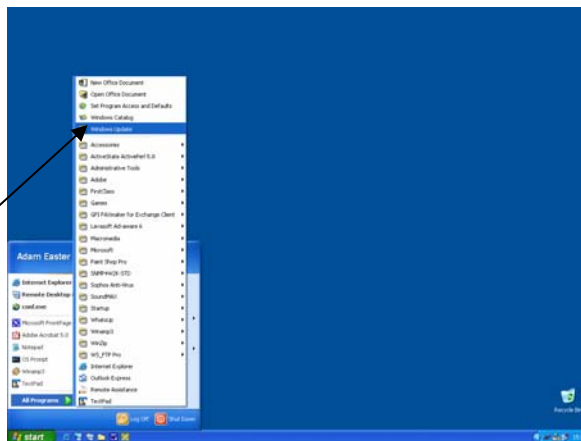

Open Internet Explorer

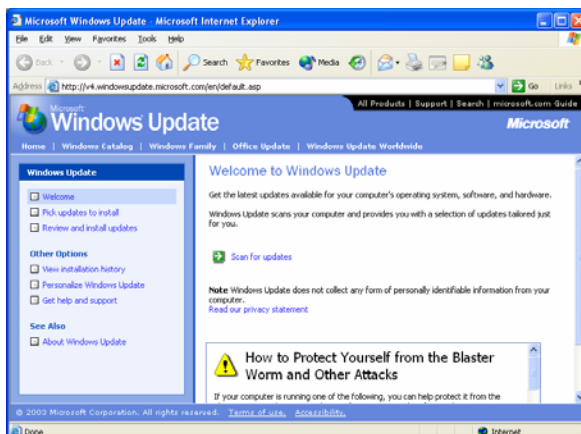

In the address bar type: -
<http://windowsupdate.microsoft.com>

OR

Click “Start” > “Programs”
> “Windows Update”

This will take you to the
Windows Update page.

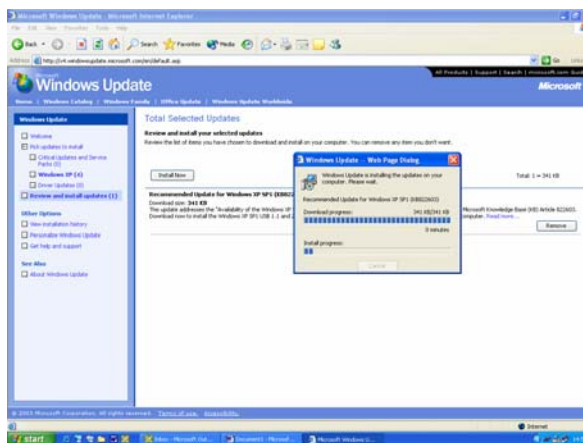

Click on the “Scan for Updates” link and wait for the scan to complete. If it is the first time that windows update has been run, an active X control box will appear asking if it is ok to install a Microsoft approved program. Click on “ok”.

Once the scan has run, in the left pane there are links to “Critical Updates”, “Recommended Updates” and “Driver updates”.

The critical updates are essential and should be installed immediately. The other updates are optional which advanced users may choose to install. Once all the relevant updates have been selected, click “Review and install updates”.

This will show a list of the updates that have been chosen. To install them, click on “Install now”. Accept the terms and conditions and the computer will start downloading and installing the updates.

Once the updates have been installed the computer may need to be re-started. Once this is done then the procedure is complete and your computer will be up to date.
